ETERNIUM ARMORY

CentraMind Blueprint

AI agent memory. Skills. Context protocol. Command Center.

v1.0.0

The system that runs the business that sells the system.

CentraMind Blueprint: Quick Start

You just got your hands on the system that runs Eternium. Not a watered-down version. The actual architecture. Let's get you running.

Two Paths

Path 1: Start Immediately (2 minutes)

Already have an Eternium account? Skip the clone entirely.

- Go to eternium.ai/products/centramind-blueprint
- Sign in and grab your API key
- Your Command Center dashboard is already hosted

Done. You're in. The dashboard reads from your Supabase project, and the API handles the heavy lifting.

Path 2: Run It Yourself (15 minutes)

Want full control? Clone the repo and run it locally.

```
git clone https://github.com/EterniumAI/armory-centramind-blueprint.git
cd armory-centramind-blueprint

npm install
```

Set up Supabase (free tier works fine):

- Create a project at supabase.com
- Go to SQL Editor, paste the contents of `supabase/migrations/001_core_schema.sql`, click Run
- Copy your Project URL and Anon Key from Settings > API

Create your `.env`:

```
VITE_SUPABASE_URL=https://your-project.supabase.co
VITE_SUPABASE_ANON_KEY=your-anon-key
```

Fire it up:

```
npm run dev
```

Open `http://localhost:5173`. You should see your Command Center.

Path 2b: Hand It to Claude Code (5 minutes)

If you have Claude Code installed, this is even faster:

```
git clone https://github.com/EterniumAI/armory-centramind-blueprint.git
cd armory-centramind-blueprint

claude
```

Then tell it:

```
Set up this project. I need a Supabase project created, the migration run, and the .env
configured. My Supabase credentials are: [paste your URL and anon key].
```

Claude Code reads the CLAUDE.md, understands the project, and does the rest.

What's Inside

LAYER	FILES	PURPOSE
Central Intelligence	CLAUDE.md, OWNER.md, state/directives.json	AI knows your business
Contextual Memory	state/session-log.json, memory/MEMORY.md	AI remembers across sessions
Autonomous Agents	.claude/skills/	Reusable workflows (/standup, /handoff)
Human Override	TODO.md, HEARTBEAT.md, Command Center	You stay in control

What's Next

- Fill in OWNER.md with YOUR info (the AI is only as good as the context you give it)
- Run `/standup` every morning, `/handoff` every evening
- Add your own skills in `.claude/skills/`
- Read the full README for architecture details and rebrand instructions
